

FALLBROOK PUBLIC UTILITY DISTRICT MEETING OF THE ENGINEERING & OPERATIONS COMMITTEE

AGENDA

MONDAY, NOVEMBER 14, 2022 11:00 A.M.

FALLBROOK PUBLIC UTILITY DISTRICT 990 E. MISSION RD., FALLBROOK, CA 92028 PHONE: (760) 728-1125

THIS MEETING WILL BE HELD PURSUANT TO GOVERNMENT CODE SECTION 54953(e)(1)(A), WHICH WAIVES CERTAIN BROWN ACT TELECONFERENCING REQUIREMENTS DURING A PROCLAIMED STATE OF EMERGENCY WHEN STATE OR LOCAL OFFICIALS HAVE IMPOSED OR RECOMMENDED MEASURES TO PROMOTE SOCIAL DISTANCING, AND ALLOWS SOME OR ALL OF THE MEMBERS OF THE ENGINEERING & OPERATIONS COMMITTEE TO ATTEND THIS MEETING TELEPHONICALLY OR VIA VIDEO CONFERENCE. MEMBERS OF THE PUBLIC WHO DO NOT WISH TO ATTEND IN PERSON ARE ENCOURAGED TO PARTICIPATE IN THE MEETING VIA WEB CONFERENCE USING THE BELOW CALL-IN AND WEBLINK INFORMATION. MEMBERS OF THE PUBLIC MAY ALSO PARTICIPATE IN THIS MEETING BY ATTENDING IN PERSON AT THE DISTRICT OFFICE LOCATED AT 990 E. MISSION RD., FALLBROOK, CA 92028.

Join Zoom Meeting

PUBLIC COMMENTS: Members of the public may submit public comments and comments on agenda items in one of the following ways:

SUBMIT COMMENTS BEFORE THE MEETING:

- By emailing to our Board Secretary at <u>leckert@fpud.com</u>
- By mailing to the District Offices at 990 E. Mission Rd., Fallbrook, CA 92028
- By depositing them in the District's Payment Drop Box located at 990 E. Mission Rd., Fallbrook, CA 92028

All comments submitted before the meeting by whatever means must be received at least 1 hour in advance of the meeting. All comments will be read to the Board during the appropriate portion of the meeting. Please keep any written comments to 3 minutes.

<u>REMOTELY MAKE COMMENTS DURING THE MEETING</u>: The Board President will inquire prior to Board discussion if there are any comments from the public on each item.

- Via Zoom Webinar go to the "Participants List," hover over your name and click on "raise hand." This will
 notify the moderator that you wish to speak during oral communication or during a specific item on the
 agenda.
- Via phone, you can raise your hand by pressing *9 to notify the moderator that you wish to speak during the current item.

MAKE IN-PERSON COMMENTS DURING THE MEETING: The Board President will inquire prior to Board discussion if there are any comments from the public on each item, at which time members of the public attending in person may make comments.

THESE PUBLIC COMMENT PROCEDURES SUPERSEDE THE DISTRICT'S STANDARD PUBLIC COMMENT POLICIES AND PROCEDURES TO THE CONTRARY.

If you have a disability and need an accommodation to participate in the meeting, please call the Board Secretary at (760) 999-2704 for assistance.

I. PRELIMINARY FUNCTIONS

CALL TO ORDER / ROLL CALL

PUBLIC COMMENT

II. <u>ACTION / DISCUSSION</u> ------(ITEMS A–C)

- A. AWARD OF HAWTHORNE LIFT STATION REPLACEMENT & SEWER MAIN INSTALL PROJECT
- B. AWARD OF DAILY-ROSS PIPELINE REPLACEMENT PROJECT
- C. DISTRICT FLEET AND HEAVY EQUIPMENT REPLACEMENT PROGRAM

III. ADJOURNMENT OF MEETING

* * * * *

DECLARATION OF POSTING

I, Lauren Eckert, Executive Assistant/Board Secretary of the Fallbrook Public Utility District, do hereby declare that I posted a copy of the foregoing agenda in the glass case at the entrance of the District Office located at 990 East Mission Road, Fallbrook, California, at least 72 hours prior to the meeting in accordance with Government Code § 54954.2.

I, Lauren Eckert, further declare under penalty of perjury and under the laws of the State of California that the foregoing is true and correct.

November 10, 2022 Dated / Fallbrook, CA <u>/s/ Lauren Eckert</u> Executive Assistant/Board Secretary TO: Engineering & Operations Committee
FROM: Aaron Cook, Engineering Manager
DATE: November 14, 2022
SUBJECT: Award of Hawthorne Lift Station Replacement & Sewer Main Install Project

Description

Request for Board approval to award the Hawthorne Lift Station Replacement & Sewer Main Install Project to the lowest responsive bidder.

Purpose

As part of the District's capital improvement program, the District is improving the reliability of the sewer collections system through strategic replacement of aging infrastructure and consolidating sewer lift stations to reduce maintenance time and costs. The Hawthorne Lift Station Replacement project will eliminate a small lift station and force main by adding approximately 500 linear feet of gravity sewer main, connecting it to the Shady Lane Lift Station service area. This project will also replace 220 linear feet of aging inaccessible sewer main near Main Avenue and Elder Street. The new section of sewer will be relocated into the street enabling access for routine cleaning. District staff prepared the design package for the project and solicited for general contractor construction bids. Bid opening was November 9, 2022. Seven (7) bids were received. A summary of the bid results is below:

11/9/22 Bid	
Meeting Results	
COMPANY	BID AMOUNT
Palm Engineering, Inc.	\$219,000
Transtar Pipeline, Inc.	\$256,000
PK Mechanical Sys,	\$275,000
Inc.	
M-Rae Engineering,	\$403,000
Inc.	
DB Pipeline, Inc.	\$463,000
Bert W. Salas, Inc.	\$500,324

Palm Engineering, Inc. was the apparent lowest responsible bidder at \$219,000.

Palm Engineering, Inc. was previously awarded Job No. 3186, Pipeline Replacements FY23 on September 2, 2022.

MEMO

Budgetary Impact

The work will be completed within the Board authorized total capital budget.

Recommended Action

That the Committee recommend to the Board award of the Hawthorne Lift Station Replacement & Sewer Main Install Project to the lowest responsible bidder, Palm Engineering, Inc., for \$219,000.

МЕМО

TO:	Board of Directors
FROM:	Aaron Cook, Engineering Manager
DATE:	November 14, 2022
SUBJECT:	Award of Daily-Ross Pipeline Replacement Project

Description

Request for Board approval to award the Daily-Ross Pipeline Replacement Project to the lowest responsive bidder.

<u>Purpose</u>

This project is a part of the District's pipeline and valve replacement program, specific to the De Luz Service area. It replaces approximately 400 linear feet of 12-inch water main within an area of Ross Road that has experienced multiple leaks. District staff prepared the design package for the project and solicited for general contractor construction bids. Bid opening was November 10, 2022. Five (5) bids were received. A summary of the bid results is below:

COMPANY	BID AMOUNT
PK Mechanical	\$170,000
Transtar	\$237,500
Palm Engineering	\$242,280
DB Pipeline	\$285,000
G&A Nelos	\$360,780

PK Mechanical was the apparent lowest responsible bidder at \$170,000

PK Mechanical has successfully performed work for the District in the past.

Budgetary Impact

The work will be completed within the Board authorized total capital budget.

Recommended Action

That the Committee recommend to the Board award the Daily-Ross Pipeline Replacement Project to the lowest responsible bidder, PK Mechanical, for \$170,000.

ΜΕΜΟ

TO: Engineering & Operations Committee
FROM: Carl Quiram, Operations Manager
DATE: December 5, 2022
SUBJECT: District Fleet and Heavy Equipment Replacement Program

<u>Purpose</u>

To present the board an updated six-year anticipated fleet and heavy equipment replacement program expounding optimum deployment of allocated funds to maintain safe and reliable vehicles and equipment for efficient and prompt customer service. This plan also addresses compliance with present and future California Air Resources Board (CARB) requirements.

<u>Summary</u>

This memorandum, updated annually, shall serve as a guideline for CARB compliance, the Fleet Assessment Chart, the Fleet Replacement Plan, the (OFF-ROAD) Heavy Equipment Primary Functions, the (OFF-ROAD) heavy equipment replacement plan and the Digital Off –Road Online Reporting System (DOORS) compliance.

(OFF-ROAD) Heavy Equipment Primary Functions

The District maintains sufficient heavy equipment to provide Field Services Construction, Maintenance, Meters and Collections crews along with Operations and the WRP the tools necessary to respond to emergencies, perform daily tasks, maintain facilities all while continuing capital improvement projects without disruption. The primary function of each piece of (off-road) heavy equipment has been outlined below.

/ /				
Number	Year	Make	Туре	Primary Function
1302	2010	Case 580M EXT BACKHOE	Skip loader	Construction-Excavating large mainline repairs/valve replacements
1303	2020	John Deere 310HL	Backhoe	Meter Services-New meter installs/main line and meter leak repairs

District Off-Road Heavy Equipment Replacement Plan

In order to maintain safe and reliable heavy equipment, FPUD staff has developed a (Off-Road) Heavy Equipment Replacement Plan. This plan will be updated annually using Qtanium Connect fleet assessment software, The DOORS program and communication with department Supervisors and staff to address potential changes in equipment requirements.

			·	Replacement	
Number	Year	Make	Туре	Year	Status
		Case 580M EXT

2023-2029 (Off-Road) Heavy Equipment Replacement Plan

The intent District's Off Road Heavy Equipment Replacement Plan is to reduce maintenance costs of aging off-road fleet vehicles and maintain CARB emission compliance. The CARB requires all off-road equipment to be reported using the Diesel Off-Road Online Reporting System (DOORS). The table below is a breakdown of the Districts current registered off-road fleet as of July 2022. The Districts current fleet meets the CARB emissions target until year 2024.

On Road Fleet

In addition to the off road vehicles, the District also maintains an on road fleet of 49 vehicles ranging from Class 1 to Class 8 Vehicles. The majority of these vehicles (27) are either half-ton trucks or passenger cars.

The attached Fleet Replacement Plan (Attachment A) was developed using the Fleet Assessment Chart (Attachment B). Staff gathers information from Qtanium Connect software, department Supervisors, the fleet Mechanic and the Field Services Manager to develop this chart. Due to the ever-changing nature of vehicle repairs, maintenance and

demands, this plan is modified annually to better synchronize future purchases. Utilizing this quantitative data, FPUD staff can ensure fund allocation to best serve employee requirements for optimal customer service. Red-flagged assets are scheduled replacements for the future fiscal year, yellow-flagged assets are 3-4 years out, and green-flagged assets are 5+ years. This year's update accomplishes two things; one is the addition of a CIP escalation to give a more realistic view of future costs, and two is the introduction of Electronic Vehicles to comply with new CARB regulations.

Zero Emission Vehicle Rules

On September 23, 2020, Governor Newsom's Executive Order N-79-20. The Executive Order sets a goal that 100 percent of in-state sales of passenger cars, trucks, and off-road equipment will be zero-emission by 2035. Medium- and heavy-duty vehicles will be zero-emission by 2045. The California Air Resources Board (CARB) is now in the process of codifying the Governor's Executive Order. At their regular meeting on August 25, 2022, the CARB Board approved the private fleet portion of the rules. It has recently proposed a new rule that would require California public fleets to purchase 100 percent zero-emission trucks by 2027. The rules will phase in the transition of new vehicle purchases with a gross vehicle weight of 8,500 lbs. or greater with a phased approach. By 2024, new fleet truck purchases would need to be 50 percent zero-emission. From 2027 onward, 100 percent of new purchases would need to be zero-emission. "Zero emission" includes both electric and hydrogen fuel cell vehicles.

There has been significant collaboration between CARB and the California Public Utilities Commission. Through the electric utilities, grant money is available to early adopters. SDG&E offers a program called Power Your Drive for Fleets (Fact Sheet in Attachment C). That grant will reimburse the District for 80% of the cost of the installation of fleet charging infrastructure. The only stipulations of the grant are that the District purchase at least two electric vehicles in the next 5 years and that the District maintain the chargers for at least a period of 10 years.

Plan for Compliance

Staff has evaluated our current fleet purchase plan for the next 6 years and has determined that the District could reach the intent of the CARB rules with EV replacements of several vehicles. The overall frequency of vehicle purchases has not changed. Our intent is to buy two vehicles to meet the conditions of the grant and test them to be sure they meet the District's needs before purchasing more. The matrix has been updated to comply with the CARB rules and reflect which vehicles could be replaced by EVs. Ford now offers an F-150 Lightning fully electric pickup truck. Sweetwater Authority received their first Lightning about three months ago and has already found it to be a viable alternative to the current internal combustion engine (ICE) F-150. The EV version of the F-150 fleet vehicle is approximately \$45,000. The purchase cost of an F-150 Lightning is slightly more expensive than the ICE version; electric vehicles are considerably cheaper to run and to maintain. The Lightning has a towing capacity of 7,700 lbs and a battery range of 230 miles full or 160 miles on daily charge, which is more than

adequate for our daily use. FPUD currently has 27 Class 1 & 2a vehicles that functionally could be replaced by the Lightning or a comparable vehicle. Chevrolet has plans to release a comparable vehicle in the near future.

Staff has evaluated installing chargers at the Water Recycling Plant (WRP), as well as the main campus at 990 E. Mission Road. Phase 1 (first 5 years) would include the backbone infrastructure in both locations designed to meet future needs in addition to the current phase. Staff is recommending installing three Level 2 chargers at the WRP, which should service all of their future needs. At the main shop, the District would install six Level 2 Chargers and one DC Fast Charger (DCFC). That initial phase should address the Districts needs for the next 7 years. In the future, it will just be a case of adding new charger legs to the existing system. Staff's rough estimate for the cost to purchase and install these chargers is around \$360,000. The grant, in that case, would be \$288,000 leaving the District cost at \$72,000. If the Board approves staff's recommendation, a more detailed estimate will be included in next year's budget.

The additional update to this fleet plan is the reflection of CPI increases each year. With delivery and supply chain issues equipment has gotten much more expensive.

Fleet Assessment Chart

The current fleet plan is shown in Attachment A. The following framework/methodology was developed in an effort to improve fleet management decisions. The goal is to combine industry standard replacement criteria (age, mileage, etc) with specific District data (reliability, repair costs, etc) in order to help make more prudent decisions for vehicle replacement. Staff reviewed other public agencies fleet programs as a model for this framework.

This tool will be used to develop and refine the Fleet Replacement Plan. There are 12 model parameters divided into 3 major categories: Condition

- Age
- Mileage
- Hours
- Assessment

Impact on Operations

- Nature of Work
- Frequency of Use
- Reliability
- Redundancy
- Reparability

Return on Investment

- Repair Cost
- Resale Vale
- MPG

After data compilation, scores are given to each criterion, which is then tabulated on the assessment chart (Attachment B). The scores, while not conclusive, frame the discussion of which items need to be replaced over the course of the next 6 fiscal years. The total gross scores accumulated from the parameters listed above are as follows:

0-50 points – retain the asset as it will not need replacement for at least 5+ years 51-75 points – repair the asset while preparing for its replacement within the next 3 to 5 years

76-120 points – replace the asset within the next 1 to 2 years

As the vehicle changes over time due to wear, usage, age, etc, it will be given higher and higher point totals. This gradual phasing out of older, more expensive to maintain vehicles allows the District to keep a reliable fleet while justifying purchasing decisions.

RETAIN 0 - 50 pointsREPAIR 51-75 pointsREPLAC 76 - 120	
---	--

CONDITION

- Age This is one of the single most important criteria when considering replacement of a vehicle as it is easily determined and removes much of the guesswork out of what might fail. However, due to the District's varied use of assets, two vehicles of the same age could be in drastically different stages of their life. As such, age is not the stand-alone benchmark in this category.
- Mileage A more useful indicator of actual replacement needs of a vehicle is mileage as it indicates relative wear and tear on the power train and the overall vehicle. Mileage is not applied when judging replacement considerations for offroad assets such as backhoes and loaders. Therefore, hours are rated double when reviewing heavy equipment.
- Hours Hours help indicate when an off-road asset may be due for retirement. In addition, hours may help determine when a light duty vehicle should be considered for replacement as its idling time may be long despite having low mileage. Frequently construction trucks idle at job sites in order to power tools.
- Assessment A condition assessment is also necessary before a replacement can be considered. As most vehicles owned by the District are used for construction purposes and frequently operated in extreme conditions and rugged terrain.

CONDITION – 40 points maximum		
Parameters	Points	Criteria for Point Bands

	10	10 years +
Age	5	5-9 years
	0	1-4 years
	10	100,000 +
Mileage	5	40,000-99,999
	0	1-39,999
	10	1,000+
Hours	5	400-999
	0	1-399
	10	Poor condition
Assessment	5	Fair condition
	0	Good condition

IMPACT ON OPERATIONS

As on and off-road equipment is drastically different for each criterion in this category, different weights will be applied when considering each point score based on the type of asset being reviewed.

- Nature of Work The type of work the asset performs is crucial to understanding the urgency of replacement and helps determine the amount of risk the District could face when deciding to replace it or continue to use it for another year. Is the asset engaged in critical functions, or as transportation only?
- Frequency of Use How often is the asset used? This can often be an important question when determining replacement. If the asset is used infrequently, its life can be extended, and greater emphasis can be placed on this criterion when making a repair/replace decision.
- Reliability Some of the District's vehicles, despite its frequency of use, must be in proper working order and ready-to-use, as it is critical to operations. For example, the District only owns one 25-ton crane and its use is limited; if it is not reliable, this single piece of equipment could affect the field services departments' productivity as well as operations at the WRP.
- Redundancy Does the District have another piece of equipment that could be utilized while determining a repair/replacement decision? If there is redundancy, perhaps an asset can be run until it is no longer operational, rather than for replacement before it reaches end-of-life.
- Repairability There are scenarios in which an asset may have low miles and be in good condition but would still need to be considered for replacement. If repairs are necessary and parts suppliers no longer supported the vehicle due to age, the District must consider retiring the asset.

IMPACT ON OPERATIONS - 50 points maximum

Parameters	Points	Criteria for Point Bands
	10	Critical
Nature of Work	5	Fits District Needs/Not Individual Needs
	0	Useful
	10	Relied upon daily
Frequency of Use	5	Used occasionally
	0	Randomly, as need arises
	10	Down >2x per month or 10 days/month
Reliability	5	Down 3x in 3 months or 14 days in 3 months
-	0	Down 1x in 3 months or <3 days in 3 months
Redundancy	10	No dependable alternative
	0	Have replacement readily available
Repairability	10	Replacement parts unavailable
	5	Parts to be discontinued in next 3-5 years
	0	Readily available parts at multiple vendors

Return-on-Investment (ROI)

- Repair Cost Another valuable metric for determining replacement decisions, is to consider the repair costs for an asset. By utilizing the District's Qtanium Connect program staff can make informed decisions based on past repair costs along with current repair estimates to determine if it is more effective to replace the asset rather than repair it.
- Auction Resale Value The vehicle value is important financial information. If the
 asset has little market value, there is less incentive to repair the assets. However,
 if the resale results in a sizable cash value, it can help off-set the cost of
 replacement.
- Gas/Diesel Mileage Determining the MPG of the vehicle can be a useful metric when considering overall vehicle health – increasing MPG could indicate the engine is near life expectancy. New designs, better technology and improved standards of modern vehicles have a higher MPG so this must be factored into the investment.

RETURN ON INVENSTMENT (ROI) – 20 points maximum		
Parameters	Points	Criteria for Point Bands
	10	Repair costs high (20% of replacement) and rising
Repair Cost 5		Repair costs modest (<10%) and stable
	0 Repair costs low (<5% of replacement)	
Resale	10 Turn in value >20% of new	
Value 5		Turn in value 5-20% of new
value	0	Turn in value <5% of new
MPG	10	20% or more lower than MPG fueleconomy.gov
		estimates

0	Within 20% MPG fueleconomy.gov estimates

Recommended Action

Staff recommends that the Board of Directors approve this updated fleet plan and authorize staff to pursue the Power Your Drive for Fleets grant and budget accordingly in the next fiscal year.

APPENDIX

GLOSSARY

SDG&E's Power Your Drive for Fleets Program

SDG&E's goal is to make it easier for organizations to transition to an electric fleet, which can reduce operating costs, eliminate tailpipe emissions, and simplify maintenance.

As part of the commitment to clean transportation and clean air, SDG&E is implementing the Power Your Drive for Fleets program to install the charging infrastructure needed to electrify medium- and heavy-duty (MD/HD) vehicles.

Power Your Drive for Fleets is applicable to Class 2-8, on-road and off-road vehicles, including:

- Medium- and heavy-duty trucks and vans
- Transit, commuter, and school buses
- Transportation refrigeration units
- Airport ground support equipment
- Port equipment
- Forklifts and other equipment

The goal of the program is to serve a minimum of 3,000 medium- and heavy-duty on-road and off-road class 2-8 vehicles at 300 customer sites throughout the SDG&E service area.

EXECUTIVE SUMMARY

INTRODUCTION

TRANSITIONING TO ELECTRICITY FOR YOUR FLEET

SDG&E'S POWER YOUR DRIVE FOR FLEETS PROGRAM

ONGOING MAINTENANCE AND SUPPORT FOR YOUR EV CHARGING INFRASTRUCTURE

APPENDIX

GLOSSARY

SDG&E's Power Your Drive for Fleets Program (Continued)

As part of the program, customers have two options to construct and pay for charging infrastructure.

SDG&E pays for, constructs, owns, and maintains infrastructure up to the meter

Customer pays for, constructs, owns, and maintains infrastructure behind the meter for a rebate of up to 80% of the costs; Customer owns and pays for charging stations; charging rebates may apply

Figure 16: Power Your Drive for Fleets installation and ownership options.

APPENDIX

GLOSSARY

SDG&E's Power Your Drive for Fleets Program (Continued)

To be eligible to receive funding through the Power Your Drive for Fleets program, fleets must first meet the four basic criteria in Figure 17 *(right)*.

You can select from a variety of EV charger options from the **approved vendor list**. School buses, transit buses, and sites located in disadvantaged communities that are not a Fortune 1000 company are eligible for the EVSE rebates in Figure 18 *(below)* based on the power output of the charger.

Use the rebate calculator to see how much you could save.

Maximum rebate amounts per charger power level							
EVSE power	Max. rebate amount*						
Up to 19.2kW	\$3,000 per charger						
19.3kW up to 50kW	\$15,000 per charger						
50.1kW up to 150kW	\$45,000 per charger						
150.1kW and above	\$75,000 per charger						

Figure 18: Power Your Drive for Fleets maximum EVSE rebates. *Eligible sites will receive a rebate for each qualified charger for the lesser of 50% of the cost of the charger or the maximum amount based on power output as detailed above, not to exceed 50% of the cost of the charger.

PROGRAM REQUIREMENTS

APPENDIX

GLOSSARY

SDG&E's EVSE Installation Process

Engaging your utility early is the most important first step to a successful fleet electrification project. Your business' needs will define the vehicles, equipment and design of your project, and our Customer Solutions Team Member are ready to offer their expert guidance and resources to make your fleet's transition efficient and cost-effective. The figure below illustrates the steps and timeframes that you can expect once you engage with SDG&E.
